## AMSC 460 - HW7

```
clear all; format compact; close all; syms f(x) x y
```

### Problem 1

Obtain the precise operation count (number of operations  $+$ ,  $-$ ,  $*$ ,  $/$ ) for computing a matrix-matrix product  $AB$ . Suppose each matrix is  $n \times n$ .

### Problem 2

Find the  $PA = LU$  decomposition (using partial pivoting) for the matrix  $A = \begin{bmatrix} 2 & 1 \\ 4 & 3 \end{bmatrix}$ . All calculations should be recorded and done by hand. Check your answer using MATLAB's `lu` command.

```
A = [ 2 1; 4 3]
[L,U,P] = lu(A)

A =
     2     1
     4     3

L =
     1.0000     0
     0.5000     1.0000

U =
     4.0000     3.0000
         0    -0.5000

P =
     0     1
     1     0
```

### Problem 3

(Optional, not graded) Find the LU decomposition of  $A = \begin{bmatrix} 4 & 2 & 0 \\ 4 & 4 & 2 \\ 2 & 2 & 3 \end{bmatrix}$
